RSA Governance and Lifecycle

8.0 P12 Release Notes

October 2026

What's New

RSA G&L version 8.0.0 P12 introduces features designed to enhance system efficiency, automate key tasks, and improve visibility. With updates like **AFX OUT Parameter for Database Connector**, **Compliance Advisor**, **Load Balancer Support for SAP Connector**, **Password Vault Support for Generic REST Collectors and Connectors**, and **Pluggable Notification Provider Framework**, this release reduces manual intervention, optimizes performance, and bolsters security.

Highlighted Features

This section highlights the most significant and vital features introduced in RSA G&L 8.0.0 Patch 12 Release.

AFX OUT Parameter for Database Connector

RSA G&L now supports a new OUT parameter in the Database Connector stored procedure, enabling the retrieval of OUT parameter values after the stored procedure execution. This update addresses a critical limitation in stored procedure calls initiated by AFX, allowing users to avoid the implementation of secondary processes to retrieve the stored procedure execution result.

Compliance Advisor

The Compliance Advisor is introduced in RSA G&L under the **Reports** section. It includes the compliance documents, related articles, and G&L Key Performance Indicators (KPIs) used to measure compliance percentages for each article's procedures across different regions worldwide. This data is also reflected in the **Compliance Dashboard** under **Admin > Dashboards**. This requires the Advanced Dashboard Library license.

Load Balancer Support for SAP Connector

RSA G&L now supports Load Balancer connectivity for the SAP connector which enables organizations to connect to their SAP environment through an SAP Message Server rather than a single, fixed application server.

This feature enables the connector to distribute requests across multiple SAP application servers within a defined server group, which increases the reliability and availability of SAP data collection within the G&L application.

Password Vault Support for Generic REST Collectors and Connectors

RSA G&L now supports Password Vault integration for REST Collectors and Connectors. This feature allows the system to retrieve credentials dynamically, securing sensitive information and eliminating the operational risks associated with manual reconfiguration or expired passwords.

Pluggable Notification Provider Framework

RSA G&L now supports an extensible notification framework for **Templates** and **Custom Events**. In addition to the existing **Email** and **UI** notification channels, customers, partners, and RSA Professional Services (PS) teams can develop and upload custom notification providers through the UI.

This introduces standard provider interfaces, metadata-driven endpoint configuration, and automatic discovery and loading of notification providers. **Email** continues to be the default notification channel, while users can *optionally* select additional notification channels from the list of configured providers.

New Features

Feature	Description
ACM-140944	**Enhanced UI:** In the Reviews new UI, the **Enhanced UI** toggle is now Enabled by default for all users. Users can switch between the new and old UI using this toggle. Additionally, users can remove the toggle itself by setting the custom flag **FeatureFlag.UseEnhancedUIForReviews** to **false** under **Admin > System > Settings > Edit > Custom**. If the toggle is removed, the old UI will be displayed by default.
ACM-138334	A new **Agent Server Details** tab is added to the Agent UI. This tab shows the **Agent Server** information, including **Host**, **OS**, **Hardware**, and **Java Runtime**.
ACM-136764	**Thread Dump:** Users are now allowed to generate, download, schedule, and delete **Thread Dump** files under **Admin > Diagnostics**. This action triggers dump files across all nodes in a cluster.
ACM-128457	**Load Balancer Support for SAP Connector:** The SAP Connector now supports Load Balancer. It enables the connector to distribute requests across multiple SAP application servers within a defined server group.

Enhancements

Feature	Description
ACM-138761	Password Vault now supports multiple password-type fields in both **Vault Configuration** and **Vault Profiles**.
ACM-138369, ACM-137707	The Generic REST Collector and Connector now support utilizing the Password Vault to retrieve passwords for endpoint connections.
ACM-138335	**Expiration Date** of trusted SSL certificates, uploaded through **Admin > User Interface > Files > SSL Certificates**, is now being categorized by colour coding to make it easier for users to detect expiration: • Expired certificates are in **Red**. • Certificates due in 6 months are in **Yellow**.
ACM-137708	RSA G&L automatically populates Workflow variables during runtime to ensure real-time data availability for active processes without requiring custom SQL queries. Newly populated variables are: • **Change Item ID:** is now directly selectable in the workflow editor, no custom SQL required. • **Detailed AFX Provisioning Command Response:** captures the complete response or error message returned by an AFX provisioning command, making it available for use in subsequent workflow steps such as notifications, logging, or conditional branching.
ACM-137484	RSA G&L now enhances the creation and download of Archive Dump files with the following capabilities: • **Export Master Table Dumps** to S3 buckets for G&L Cloud or local file systems for On-Premise is now supported. • **RunID** column for **DumpExport** is now included and provides detailed descriptions for column headers. • **Download** and **Delete** buttons are now enabled for on-premise customers with local database. • **Purge Run History** section is newly added under **Admin > Data Management > Data Purge** to summarize latest 5 data purge runs.
ACM-134086	Termination Rule is enhanced to check all **Terminated** users in all system runs, not just newly terminated ones. It now supports two behaviours controlled by the **includeHistoricalTerminatedUsersInTermRules** flag. The flag's default value is **False**. • If the flag is set to **False**, users status changes are compared *only* to the previous run according to the system default behaviour. ◦ On the very first run, the flag has no effect; the system always scans all terminated users in the system, processes those who match the rule's condition, and logs all processed users for future runs. • If the flag is set to **True**, the system evaluates terminated users across *all* runs, excluding those already processed in previous runs.

Fixed Issues

Issue	Description
SF-02790296 ACM- 142331	Fixed an issue where the **REST Web Service** node did not accept or save **application/x-www-form-urlencoded** as the **Content-Type**, resulting in validation errors.
ACM-141176	Fixed an issue where the **AFX Server Details** page displayed incorrect IPv4 address, ActiveMQ path, and Maven path information.
ACM-141117	Fixed an issue where **Custom Events** were not imported successfully or did not include all associated data.
SF-02776422 ACM-140928	Fixed an issue where the **Due Date** in workflow emails was not displayed according to the respective deliverer's time zone.
ACM-140917	Fixed an issue where the **Termination Date** and **User ID** columns were unavailable in the Violation table.
ACM-140767	Fixed an issue where AFX did not substitute the **Mapping** variable when it was null or empty during **Create Account** capability execution.
SF-02777746 ACM-140638	Fixed an issue where database collectors became unresponsive upon detecting an empty or corrupted CSV file. RSA G&L now reports the error and exits automatically.
SF-02773212 ACM-140636	Fixed an issue where filter results were displayed incorrectly or inconsistently when creating an **Account Form**.
SF-02774047 ACM-140530	Fixed an issue where ADC Collectors could not retrieve passwords from the vault through the configured agent.
SF-02770010 ACM-140151	Fixed an issue where **Role Profile** Change Requests were not generated correctly for attributes of the **Custom Values** type.
SF-02768702 ACM-139983	Fixed an issue where invalid custom threshold settings were ignored and replaced with built-in defaults, causing unexpected **Admin Error** and **Warning** alerts or false recovery notifications. Alerts are now sent only when a valid custom threshold rule is configured.
SF-02768414 ACM-139632	Fixed an issue where incorrect **Entitlements** and **Memberships** were displayed on the **Role Review Results > Members** tab in **Role Reviews**.
SF-02760478 ACM-139583	Fixed an issue where previously selected checkboxes were not displayed correctly on the **Submitted Form** tab when an approver opened a Change Request.
SF-02760322 ACM-139341	Fixed an issue where fields on the **Schedule and E-Mail** tab were removed or not retained after editing and saving a report.
SF-02760322 ACM-139327	Fixed an issue where Active Directory Collectors took longer than expected to update group membership data, improving overall collection performance.

Issue	Description
SF-02742799 ACM-139230	Fixed an issue where successful workflow REST calls that returned an empty response body were incorrectly reported as failures. The system now recognizes the external service's actual response and handles successful no-content responses correctly.
SF-02748180 ACM-138822	Fixed an issue where parameters containing XML were not encoded correctly in RESTful Web Service- and SoapWebService-based connectors, causing capability execution failures.
SF-02752242 ACM-138564	Fixed an issue where table column divider widths did not adjust to fit the selected page size or orientation in RSA G&L.
SF-02748637 ACM-138465	Fixed an issue where accounts were not automatically mapped as orphan accounts after their associated users were terminated or deleted.
SF-02742375 ACM-138149, SF-02738987 ACM-137388	Fixed an issue where workflow imports and exports took longer than expected or did not complete successfully.
SF-02745673 ACM-138008	Fixed an issue where duplicate accounts were created during Change Request approvals instead of displaying the existing accounts.
SF-02746567 ACM-137903	Fixed an issue where purged data caused **Task Details** and **Description** information to display incorrectly for older **Closed Activities** and **Manual Fulfillment** tasks.
SF-02731024 ACM-137797	Fixed an issue where **Decision** nodes evaluated variables incorrectly, causing Workflows to follow the wrong transitions.
ACM-137763	Fixed an issue where delayed initialization of security components during G&L application start-up caused log in failures after maintenance.
SF-02727088 ACM-137332	Fixed a performance issue that caused **Data Risk Runs** to take longer than expected.
SF-02724543 ACM-136949	Fixed an issue where Change Requests generated duplicate approval tasks for the same approver when originating from different sources.

Platform Matrix

The latest application server and JDK version are certified for this release.

	RSA Governance & Lifecycle Software Bundle	Software Only (WebLogic or WebSphere)	RSA Governance & Lifecycle Virtual Application	Container
Application Server Version				
WildFly 24.0.1 Included	Qualified	N/A	Qualified	Qualified
WebLogic 14.1.1.0	N/A	Qualified	N/A	N/A
WebSphere 9.0.5.27	N/A	Qualified	N/A	N/A
JDK Version Certified				
AdoptOpenJDK 1.8.0_502	Qualified	N/A	Qualified	N/A
Oracle JDK 1.8.0_501 (WebLogic)	N/A	Qualified	N/A	N/A
IBM JDK 1.8.0_501 (WebSphere)	N/A	Qualified	N/A	N/A
Operating Systems				
SUSE (SLES 12 SP5, and SLES 15 SP7)	Qualified	N/A	Qualified	N/A
Red Hat (RHEL 8.10 and RHEL 9.8)	Qualified	N/A	N/A	N/A

*RSA G&L Virtual Application deployments are supported on Nutanix through the OVA file installation method.

Prerequisites for Applying Patch (*v8.0 P07 or Later*)

Note: In case you are upgrading directly to P10 from patch P06 or earlier, you must perform the following procedure.

When using a customer-supplied Oracle Database, or RSA-Supplied Database installed remotely, update the AVUSER and AVCSUSER schemas as follows:

1. Log in as a SYS user (or another user with SYSDBA privilege) in SQLPLUS (or another database tool, such as SQL Developer).
2. Run the following script to grant permission on the following objects:

```
GRANT EXECUTE ON SYS.DBMS_CRYPTO TO AVUSER;
GRANT EXECUTE ON SYS.DBMS_LOCK TO AVCSUSER;
```

Note: If the AVUSER schema name is not AVUSER, replace AVUSER with the appropriate schema name.

Product Support with Operating System

RSA G&L version 8.0 P05 and later software bundle is now supported on RHEL 9.4+. There are two paths to deploying RSA G&L version 8.0 software bundle on RHEL 9.4+:

1. For a fresh/new deployment of RSA G&L on RHEL 9.4+, use the 8.0.0 P11 HF01 Full Installer to install RSA G&L on RHEL 9.4+, and then upgrade G&L to the latest available patch.
2. For a previously installed deployment of RSA G&L 8.0 on RHEL 8, complete all the prerequisites described in the following section, and then upgrade the operating system from RHEL 8 to RHEL 9.4+.

Upgrading RHEL 8 with RSA G&L 8.0 to RHEL 9.4+

Before upgrading your system from RHEL 8 to RHEL 9.4, ensure the following steps are completed:

1. Apply patch 8.0.0 P05 or later successfully on the existing RHEL 8 system.
2. Apply the latest Appliance Updater for Oracle Database to the existing RHEL 8 system containing the RSA-provided database.

After completing the upgrade to RHEL 9.4, ensure the following:

- The RSA-supplied JDK is installed and available.

The following packages are required for Red Hat Enterprise Linux 9.4 environments and may need to be explicitly installed in addition to the operating system.

binutils-2.35.2-43.el9.x86_64	make-4.3-8.el9.x86_64
gcc-11.4.1-3.el9.x86_64	sysstat-12.5.4-7.el9.x86_64
gcc-c++-11.4.1-3.el9.x86_64	javapackages-tools
glibc-2.34-100.el9.x86_64	lcms2
glibc-devel-2.34-100.el9.x86_64	rsync
ksh	syslinux
libaio-0.3.111-13.el9.x86_64	dejavu-sans-fonts
libaio-devel-0.3.111-13.el9.x86_64	dejavu-serif-fonts
libgcc-11.4.1-3.el9.x86_64	dejavu-sans-mono-fonts
libstdc++-11.4.1-3.el9.x86_64	fontconfig
libstdc++-devel-11.4.1-3.el9.x86_64	zip
libXi-1.7.10-8.el9.x86_64	unzip
libXtst-1.2.3-16.el9.x86_64	libns

Note: Once all the prerequisites are completed as described above, start the RSA G&L services.

RSA G&L Product Version Lifecycle

RSA has a defined End of Primary Support (EOPS) policy associated with all major versions. For more details, please refer to the Product Version Life Cycle for RSA Governance & Lifecycle.

Note: SecurID Governance & Lifecycle v7.5.2 has reached EOPS as of July 2025.
